June 2026

World-Class Vibration Monitoring Experts To Address Prestigious Beran Conference

**Latest innovations will be showcased at Beran Conference 2026
(1-2 July 2026, Beran Instruments Ltd, Torrington, Devon)**

Vibration monitoring experts from across the globe will be converging on the [Beran Conference 2026](#) – an elite engineering innovation summit that has taken place only four times in the last 17 years.

They will unveil the latest developments in vibration monitoring for sectors including power generation, oil and gas, petrochemicals, nuclear, ~~energy~~ and water.

Entry to this elite conference is limited to just 40 delegates and – at time of going to Press – only 15 places remained.

The free event is being held on 1-2 July 2026 at Beran Instruments Ltd (a CMTG company). Beran is a world-class specialist in the innovation of condition monitoring solutions tailored specifically for the power industry.

Speaking for the second time at the Beran Conference will be highly-respected Professor Aly El-Shafei, Managing Director at RITEC, the largest Predictive Maintenance (PdM)/Condition Based-Maintenance (CBM) company in the Middle East.

Dr El-Shafei is also Professor of Vibration Engineering at Cairo University, is a Certified Vibration Analyst (Category IV), holds a PhD from the Massachusetts Institute of Technology (MIT) and is Vice President of the Vibration Institute, USA.

He chairs the ISO working group responsible for developing international standards on machinery vibration diagnostics (ISO 13373), holds five US patents and has published more than 80 papers on rotordynamics and machinery diagnostics. In 2017, he received the Grand African Innovation Award.

Also speaking will be:

- Rik Geerdink – Senior Vibration Expert and CEO of In2ViBa
- Ahmed Khan, MSc AMIMEchE – Dynamics Engineer (Rotating Equipment) at EDF Energy Nuclear Services
- Josh Lovatt – Monitoring & Diagnostics Engineer at Cognitive Business
- Aidan Roche, BSc, MSc, IEng – Technical Manager (Rotating Machinery) at Suez UK

- Adam Shingles, CEng – Lead Rotating Equipment Engineer at RWE Flexible Generation.

This year's Beran Conference will be only the fifth of its kind. Beran is hosting the event at its UK HQ in Torrington, Devon – giving delegates a greater opportunity to view its cutting-edge developments in condition monitoring solutions for rotating machinery.

Previous conferences have been held at the SS Great Britain, Bristol (2015), Iron Bridge, Shropshire (2022) and Chatsworth House, Derbyshire (2024).

Beran's Global Sales and Business Development Manager Duncan Affleck said: "This highly specialised conference is a fantastic opportunity to hear from – and network with – some of the world's foremost experts in vibration monitoring.

"It is uniquely focused and tremendously empowering but also very relaxed. This gives delegates access to some of vibration monitoring's leading minds in a boutique setting, rather than simply viewing them from afar in a large conference hall," he added.

Beran is a global leader in advanced online condition monitoring and vibration equipment solutions. It has direct sales and service subdivisions in France, Germany, Italy and the USA, along with an extensive network of global distributors.

Beran's cutting-edge products – which include the acclaimed PlantProtech condition monitoring and protection solutions – are deployed worldwide in power generation companies across diverse sectors, including nuclear power generation. The company specialises in monitoring critical rotating assets, such as steam, gas and hydro turbines – ensuring optimal performance and reliability.
